Which version of the kernel did you download and build?

*I downloaded Linux Kernel version 5.3.7*

About how many lines of C code, total, are contained in the source tarball you downloaded?

*After unpacking the tarball containing the Linux kernel and changing into the directory, I ran the command `find . -name '*.c' | xargs wc -l`, which gave me the output **1,256,123** total lines of code*
